

Applying filters to SQL queries

Project description

I used SQL to filter through data from different tables. More specifically, I used sequel to retrieve data from the log-in-attempts table, filtering through to find information on records like the number of attempts made after hours, login attempts made on specific dates and attempts made from specific locations. We also looked at the employees database and filtered out information like employees in a specific department, or a combination of departments. Screenshots of the SQL queries are attached for illustration

Retrieve after hours failed login attempts

```
MariaDB [organization]> clear
MariaDB [organization]> SELECT *
-> FROM log_in_attempts
-> WHERE login_time > '18:00' AND success = FALSE;
```

event_id	username	login_date	login_time	country	ip_address	success

19 rows in set (0.036 sec)

This query extracts a log of all failed login attempts that were made after 6pm from the login attempts table. The results summary at the bottom of the table show that there were 19 of them.

Retrieve login attempts on specific dates

```
MariaDB [organization]> SELECT *  
  -> FROM log_in_attempts  
  -> WHERE login_date = '2022-05-09' OR login_date = '2022-05-08';
```

This query asked for all login attempts that were made between a specific date range.

Retrieve login attempts outside of Mexico

```
MariaDB [organization]> SELECT *  
-> FROM log_in_attempts  
-> WHERE NOT country LIKE 'MEX%';
```

46	eraab	2022-05-11	11:29:27	CAN	192.168.24.12	0

This query retrieved all login attempts that were made outside of Mexico. Because Mexico was not always written in full, the '%' wildcard character is used to set the search parameters to filter all possible iterations of 'Mexico' contained in the table.

Retrieve employees in Marketing

```
MariaDB [organization]> SELECT *  
  -> FROM employees  
  -> WHERE department = 'Marketing' AND office LIKE 'East%';
```

employee_id	device_id	username	department	office
1000	a320b137c219	elarson	Marketing	East-170
1052	a192b174c940	jdarosa	Marketing	East-195
1075	x573y883z772	fbautist	Marketing	East-267
1088	k865l965m233	rgosh	Marketing	East-157
1103	NULL	randerss	Marketing	East-460
1156	a184b775c707	dellery	Marketing	East-417
1163	h679i515j339	cwilliam	Marketing	East-216

```
7 rows in set (0.001 sec)
```

T
hi

s table retrieves all entries, all records of employees in the marketing department but that work from offices in the East. Again the wildcard is applied to filter out all offices East. The 'AND' and 'LIKE' operators were used to achieve this. 'LIKE' is used when there's a need to match part or all of a set of string entries from the table.

Retrieve employees in Finance or Sales

```
MariaDB [organization]> SELECT *  
  -> FROM employees  
  -> WHERE department = 'Finance' OR department = 'Sales';
```

employee_id	device_id	username	department	office
1003	d394e816f943	sgilmore	Finance	South-153
1007	h174i497j413	wjaffrey	Finance	North-406
1008	i858j583k571	abernard	Finance	South-170
1009	NULL	lrodriqu	Sales	South-134
1010	k242l212m542	jlansky	Finance	South-109
1011	l748m120n401	drosas	Sales	South-292
1015	p611q262r945	jsoto	Finance	North-271
1017	r550s824t230	jclark	Finance	North-188
1018	s310t540u653	abellmas	Finance	North-403
1022	w237x430y567	arusso	Finance	West-465
1024	y976z753a267	iuduike	Sales	South-215
1025	z381a365b233	jhill	Sales	North-115
1029	d336e475f676	ivelasco	Finance	East-156
1035	j236k303l245	bisles	Sales	South-171
1039	n253o917p623	cjackson	Sales	East-378
1041	p929q222r778	cgriffin	Sales	North-208

The query in this screenshot pulls out entries of all employees that are either in finance or sales. The 'OR' operator was used to achieve this.

Retrieve all employees not in IT

```
MariaDB [organization]> SELECT *  
-> FROM employees  
-> WHERE NOT department = 'Information Technology';
```

employee_id	device_id	username	department	office
1000	a320b137c219	elarson	Marketing	East-170
1001	b239c825d303	bmoreno	Marketing	Central-276
1002	c116d593e558	tshah	Human Resources	North-434

1025	z381a365b233	jhill	Sales	North-115
1026	a998b568c863	apatel	Human Resources	West-320
1027	b806c503d354	mrach	Marketing	West-246
1028	c603d749e374	aestrada	Human Resources	West-121
1029	d336e475f676	ivelasco	Finance	East-156
1030	e391f189g913	mabadi	Marketing	West-375
1031	f419g188h578	dkot	Marketing	West-408
1034	i679j565k940	bsand	Human Resources	East-484
1035	j236k303l245	bisles	Sales	South-171
1036	k550l533m205	rjensen	Marketing	Central-239
1038	m873n636o225	btang	Human Resources	Central-260
1039	n253o917p623	cjackson	Sales	East-378

The 'NOT' operator is used to exclude all employees in the IT department from the query results.

Summary

Using SQL queries enabled me to extract complex and specific information from the database very quickly. It is a useful tool when working with very large datasets, especially living data that changes constantly.
